1. Extract the release.7z , Then Double-click the Object_Detection_Sample.exe could show the demo. if you want to test other video, Please copy it to the etc folder and change the name as "sample.mp4". The angle and background of the test video should be close to the video in the demo.
2. When the conveyor belt stops, or in the opposite direction to the normal direction of operation, the demo may miscount.
3. sometimes, The car tyres may be count as truck tyres, which could be resolved by increasing the number of training samples.

Thanks very much for your time and Sincerely hope that you have get the expected software!
